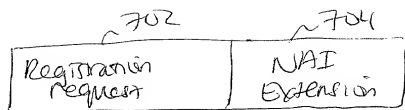

FIG. 7

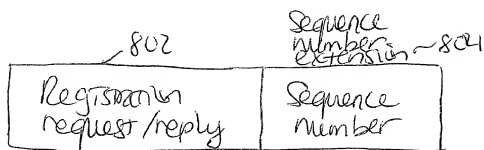

FIG. 8

FA performs proxy
registration

Obtain sequence
number
associated with
the node (e.g.,
default = 0 or
obtain from
registration table)

Provide the
sequence number
in a registration
request

Provide additional
information (e.g.,
obtained from attributes
in access reply) in the
registration request

Send the
registration
request to the
Home Agent

Receive
registration reply
from the Home
Agent including an
updated sequence
number
associated with
the node

Update registration
table with the
updated sequence
number
associated with
the node
